By Johns Hopkins Hospital

RareBooksClub. Paperback. Book Condition: New. This item is printed on demand. Paperback. 380 pages. Dimensions: 9.7in. x 7.4in. x 0.8in. This historic book may have numerous typos and missing text. Purchasers can download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1916 Excerpt: . . . this is compared with the preceding table, the colon bacillus apparently survives for a longer period of time than the typhoid bacillus, when the two organisms are placed upon books under apparently identical conditions. This may be explained by the relative resistance of *B. coli* to greater degrees of dryness and moisture than is exhibited by the typhoid bacillus. Apparently also the typhoid bacillus is more rapidly destroyed by diffuse daylight than the colon bacillus, while both organisms are destroyed in a comparatively short time by exposure to direct sunlight. Finally, it is quite evident that both *B. coli* and *B. typhosus* are able to survive for so long a time upon books kept under certain conditions, as to suggest the possibility that books may serve as vehicles of infection in typhoid fever. In a disease so important as diphtheria it is natural to expect that...
