It is straightforward in go through easier to recognize. I actually have study and that i am sure that i will going to study yet again again down the road. Once you begin to read the book, it is extremely difficult to leave it before concluding.

A brown powder is obtained, lighter than fulminating gold: this is fulminating platinum. When heated to 400 degs. it explodes, but does not detonate by friction or percussion. Notwithstanding all the valuable properties which this metal possesses, it is of little use to man, owing to its great scarcity, which has rendered it very expensive. Although it is some five times more costly than silver, it is of great value for chemical utensils, such as crucibles, spoons, small tongs, rods, c., because it possesses the two-fold power of resisting high temperatures and chemical action. It is used also for retorts for the concentration of sulphuric acid; and to make mirrors for reflecting telescopes. When beaten into thin leaves, it has sometimes been applied to porcelain in the same manner as leaf gold. A part of the Russian coinage is cast in this metal. It is employed to obtain instantaneous light in Doebereiner's lamps, in the state of a fine powder called spongy platinum, which is procured by precipitating it in muriate of ammonia. CHAPTER XXXIX.
